

Clanbeat is a virtual space for students' growth and well-being – through supporting them in taking an active role in their learning and life (i.e. agency). At the heart of it, there is the cycle of setting goals, planning actions, acting and reflecting.

While going through the loop, students monitor how they feel, how they perform and how they learn. That is in order to strengthen their foundations of social and emotional skills and learning to learn skills. It all happens in a community of interactions and synergy. The experience is designed such that it contributes towards students' adaptability to succeed in the changing world.

Our solution will help schools to provide their students better preparation for succeeding in the modern world and nudge students to improve their everyday experience. We do this by putting focus on students holistically and, next to academic data, we offer information about each student's overall growth and well-being.

For students, Clanbeat is an inspiring and an intuitive app, where they can bring their full self, interact with their school community and develop meaningful connections and a sense of belonging, manage and improve their everyday life and experience of the world, learning about themselves, their peers and learning as whole. It means more quality relationships and more quality learning.

For teachers and school leaders, Clanbeat is an easy-to-use and insightful app and desktop interface that helps to nurture humane connection with their students, relate to their lives more fully and provide increasingly personalised support. It creates value by enabling systematic approach to the development of students' critical skills and practices development.

Our ambition is to become forerunners in learning analytics. We learn and grow together with our users, closely monitoring and evaluating what creates most value for students' growth and well-being.

Behind Clanbeat is a fun-loving start-up team, consisting of technology geeks and education experts, who are passionate about human growth.

We love to include co-creators and have designed our product together with school leaders, teachers and students. Moreover, we have consulted multiple researchers and industry experts to help us build a better tomorrow.
